

The South Liberty Public Library information system will provide a website which will allow patrons to utilize library resources provided and give the librarians the tools needed to perform their everyday tasks. This site will allow new customers to find out more about the library and what we have to offer. We will be using a client-server based system. The web server will be hosted on Go Daddy web services and provide scalability and reliability for the system. The data storage will be located on Go Daddy web services running MS SQL 2012.
